1. Operating Precautions

- 1) Since front polarizer is easily damaged, please be cautious and not to scratch it.
- 2) Be sure to turn off power supply when inserting or disconnecting from input connector.
- 3) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- 4) When the panel surface is soiled, wipe it with absorbent cotton or soft cloth.
- 5) Since the panel is made of glass, it may be broken or cracked if dropped or bumped on hard surface.
- 6) Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
- 7) Do not open nor modify the module assembly.
- 8) Do not press the reflector sheet at the back of the module to any direction.
- 9) In case if a module has to be put back into the packing container slot after it was taken out from the container, do not press the center of the CCFL Reflector edge. Instead, press at the far ends of the CCFL Reflector edge softly. Otherwise the TFT Module may be damaged.
- 10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
- 11) After installation of the TFT Module into an enclosure (Notebook PC Bezel, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
- 12) Cold cathode fluorescent lamp in LCD contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
- 13) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950 or UL1950), or be applied exemption.
- 14) The LCD module is designed so that the CCFL in it is supplied by Limited Current Circuit (IEC60950 or UL1950). Do not connect the CCFL in Hazardous Voltage Circuit.
- 15) Severe temperature condition may result in different luminance, response time and lamp ignition voltage.
- 16) Continuous operating TFT-LCD display under low temperature environment may accelerate lamp exhaustion and reduce luminance dramatically.
- 17) The data on this specification sheet is applicable when LCD module is placed in landscape position.
- 18) Continuous displaying fixed pattern may induce image sticking. It's recommended to use screen saver or shuffle content periodically if fixed pattern is displayed on the screen.

2. General Description

G104VN01 V0 is a Color Active Matrix Liquid Crystal Display composed of a TFT-LCD display, a driver circuit, and a backlight system. The screen format is intended to support VGA (640(H) x 480(V)) screen and 262K colors (RGB 6-bits). All input signals are CMOS interface. Inverter card of backlight is not included.

G104VN01 V0 is designed for industrial display applications.

2.1 Display Characteristics

The following items are characteristics summary on the table under 25 °C condition:

Items	Unit	Specifications
Screen Diagonal	[inch]	10.4
Active Area	[mm]	211.2(H) x 158.4(V)
Pixels H x V		640x3(RGB) x 480
Pixel Pitch	[mm]	0.33 x 0.33
Pixel Arrangement		R.G.B. Vertical Stripe
Display Mode		TN, Normally White
Nominal Input Voltage VDD	[Volt]	3.3V or 5V
Typical Power Consumption	[Watt]	6.7W (IRCFL=6.0mA) All black pattern
Weight	[Grams]	490g(typ.)
Physical Size	[mm]	243.0(H)x 176.6(V) x 11.4(D) (Typ.)
Electrical Interface		1ch CMOS
Surface Treatment		Anti-glare, Hardness 3H
Support Color		262K colors
Temperature Range		
Operating	[°C]	-30 to +85
Storage (Non-Operating)	[°C]	-30 to +85
RoHS Compliance		RoHS Compliance

2.2 Optical Characteristics

The optical characteristics are measured under stable conditions at 25 °C (Room Temperature):

Item	Unit	Conditions	Min.	Typ.	Max.	Note
White Luminance	[cd/m ²]	IRCFL= 6mA (center point)		450	-	1
Uniformity	%	5 points	75		-	1, 2, 3

Color Gamut	%			45	-	

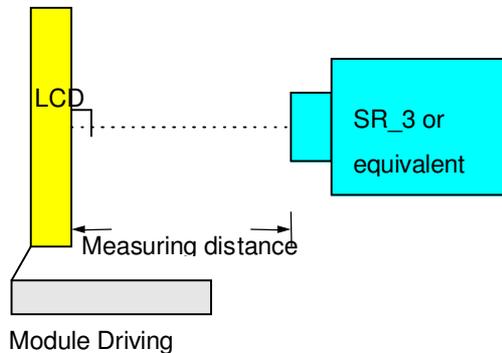

Note 1: Measurement method

Equipment Pattern Generator, Power Supply, Digital Voltmeter, Luminance meter (SR_3 or equivalent)

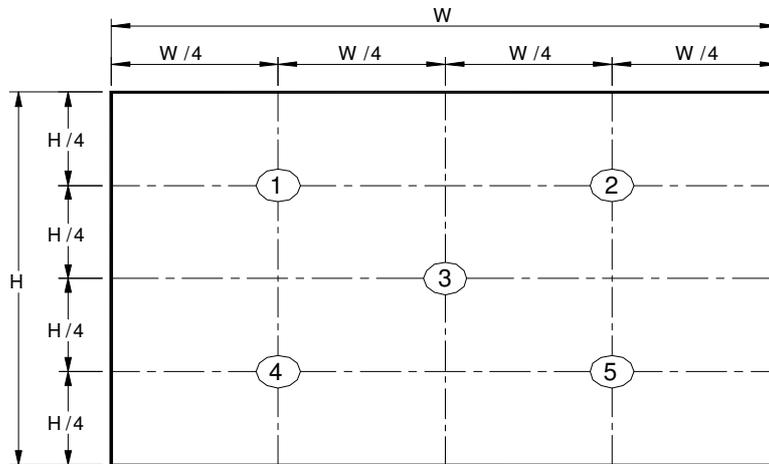

Aperture 1° with 50cm viewing distance

Test Point Center

Environment < 1 lux

Note 2: Definition of 5 points position (Display active area: 211.2mm (W) x 158.4mm (H))

Note 3: The luminance uniformity of 5 points is defined by dividing the minimum luminance values by the maximum test point luminance

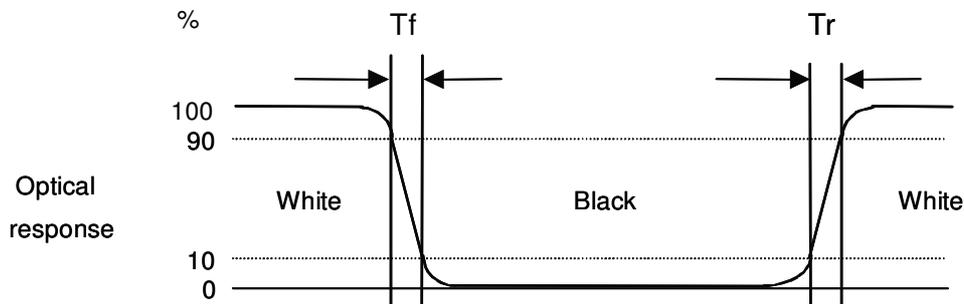

$$\hat{\sigma}_{w5} = \frac{\text{Minimum Brightness of five points}}{\text{Maximum Brightness of five points}}$$

Note 4: Definition of contrast ratio (CR):

$$\text{Contrast ratio (CR)} = \frac{\text{Brightness on the "White" state}}{\text{Brightness on the "Black" state}}$$

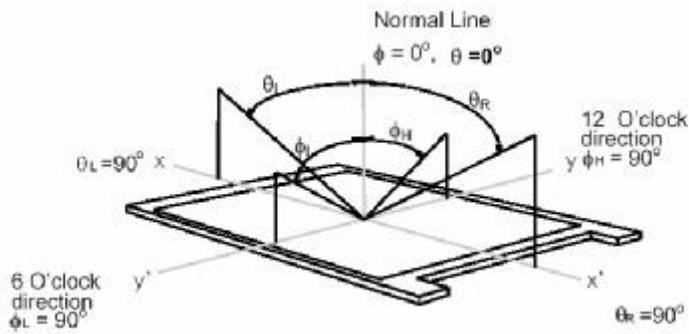

Note 5: Definition of response time:

The output signals of photo detector are measured when the input signals are changed from "White" to "Black" (falling time) and from "Black" to "White" (rising time), respectively. The response time interval is between 10% and 90% of amplitudes. Please refer to the figure as below.

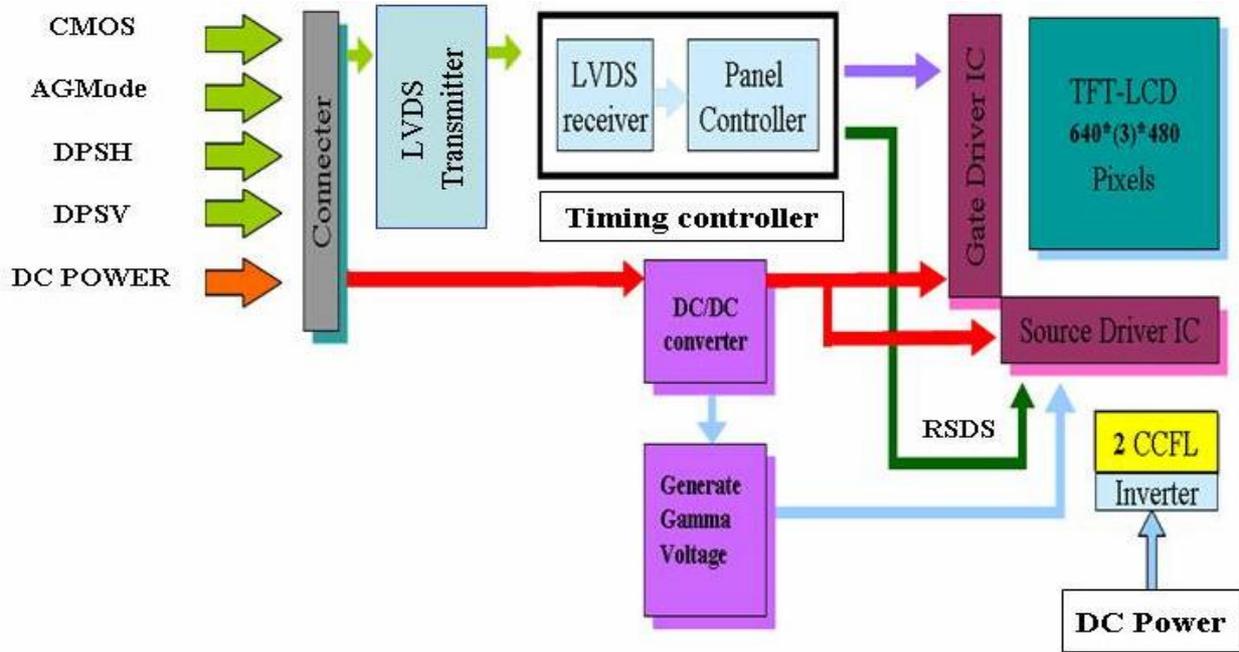

Note 6: Definition of viewing angle

Viewing angle is the measurement of contrast ratio ≥ 10 , at the screen center, over a 180° horizontal and 180° vertical range (off-normal viewing angles). The 180° viewing angle range is broken down as below: 90° (θ) horizontal left and right, and 90° (ϕ) vertical high (up) and low (down). The measurement direction is typically perpendicular to the display surface with the screen rotated to its center to develop the desired measurement viewing angle.

5.2 Backlight Unit

5.2.1 Parameter guideline for CCFL

Following characteristics are measured under a stable condition using an inverter at 25 °C (Room Temperature):

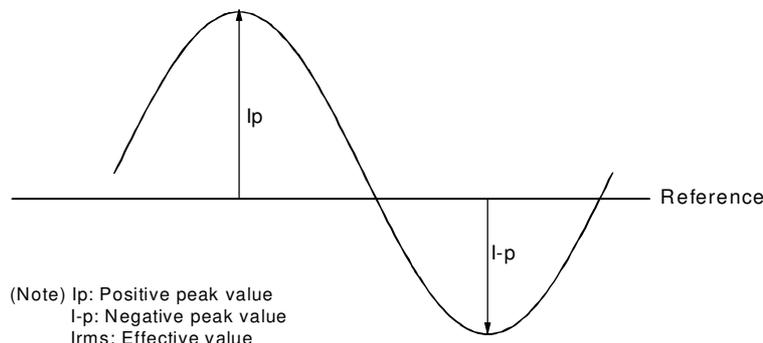

Symbol	Parameter	Min.	Typ.	Max.	Unit	Remark
IRCFL	CCFL operation range	4.5	6.0	7.0	[mA] rms	(Ta=25°C) Note 1
FCFL	CCFL Frequency	40	50	60	[KHz]	(Ta=25°C) Note 2
V _i CCFL (25°C) (reference)	CCFL Ignition Voltage	-	740	890	[Volt] rms	(Ta=25°C)
V _i CCFL (0°C) (reference)	CCFL Ignition Voltage		930	1110	[Volt] rms	(Ta=0°C)
VCFL	CCFL Discharge Voltage	440	490	540	[Volt] rms	(Ta=25°C) Note 3 IRCFL=6mA
PCFL	CCFL Power consumption (inverter excluded)	-	5.88	-	[Watt]	(Ta=25°C) Note 3 IRCFL=6mA
Lamp Life			50,000		Hrs	(Ta=25°C) Note 4 IRCFL= 6mA

Note 1: IRCFL is defined as the return current of an inverter. (In Figure. 1)

(Figure. 1: Measurement of return current)

A stable IRCFL is a current without flicker or biasing waveform provided by inverter that ensures the backlight perform to its specification. The ideal sine waveform should be symmetric in positive and negative polarities and the asymmetry rate of the inverter waveform should be below 10%.

$$\text{DC Bias} = (|I_p - I_{-p}| / I_{rms}) \times 100 \% < 10\%$$

$$\text{Crest Factor} = I_p \text{ or } (I_{-p}) / I_{rms} \text{ should have the range within } 1.414 \pm 10\%$$

It is recommended to use the inverter with detection circuit (ie: balance and protection circuit) to avoid overvoltage, overcurrent, or mismatching waveform.

Note 2: CCFL frequency should be carefully determined to avoid interference between inverter and TFT LCD.

Higher frequency will induce higher leakage current and further impact lamp life.

Note 3: Calculator value for reference ($IRCFL \times 2 VCFL = PCFL$).

Note 4: The definition of lamp life means when any of following conditions happen:

- a) Luminance falls to 50% or less of the initial value.
- b) Normal lighting is no more available (flickering, pink lighting, no lighting, etc.)
- c) Lamp voltage or lighting start voltage exceeds the specified value.

Lamp life time shortens according to

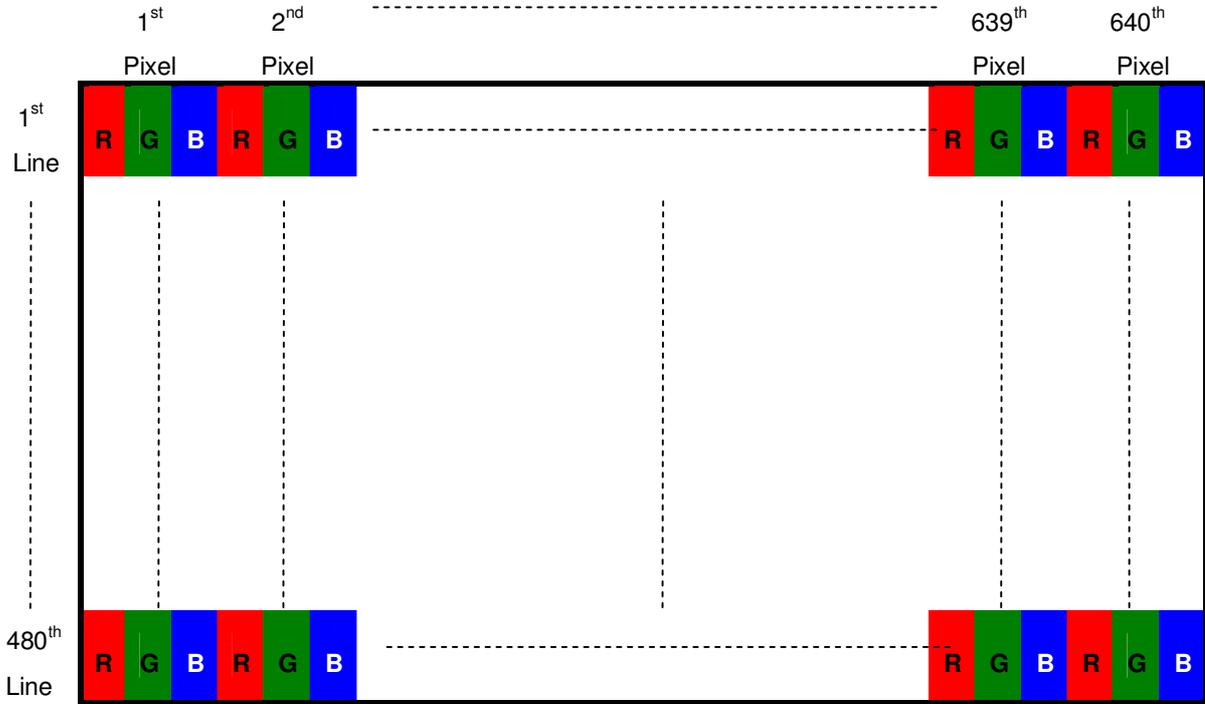

- a) Placing methodology: mercury is unevenly distributed in portrait mounting
- b) Environmental condition: low temperature reduces the presence of mercury vapor, which results in approximately lamp life of 1,000 hours
- c) CCFL surface temperature: Presence of gradient in lamp surface temperature causes uneven mercury migration
- d) Inverter design: its resonance capacitor should be fine-tuned with the impedance of CCFL
- e) Over driving current ($> 7 \text{ mA}$) shortens lamp life time dramatically.

Note 5: The display is with dual lamp design, and the CCFL current in above table refers to each lamp

6.6 Power ON/OFF Sequence

VDD power and lamp on/off sequence is as below. Interface signals are also shown in the chart. Signals from any system shall be Hi-Z state or low level when VDD is off.

Power ON/OFF sequence timing

Parameter	Value			Units
	Min.	Typ.	Max.	
T1	0.5	-	10	ms
T2	0	-	50	ms
T3	180	-	-	ms
T4	180	-	-	ms
T5	0	-	50	ms
T6	0	-	10	ms
T7	500	-	-	ms

The above on/off sequence should be applied to avoid abnormal function in the display. Please make sure to turn off the power when you plug the cable into the input connector or pull the cable out of the connector.

7. Connector & Pin Assignment

Physical interface is described as for the connector on module. These connectors are capable of accommodating the following signals and will be following components.

7.1 TFT LCD Module: Input Connector

10.2 Carton Label

11 Safety

11.1 Sharp Edge Requirements

There will be no sharp edges or comers on the display assembly that could cause injury.

11.2 Materials

Toxicity

There will be no carcinogenic materials used anywhere in the display module. If toxic materials are used, they will be reviewed and approved by the responsible AUO toxicologist.

11.3 Capacitors

If any polarized capacitors are used in the display assembly, provisions will be made to keep them from being inserted backwards.

11.4 National Test Lab Requirement

The display module will satisfy all requirements for compliance to:

UL 60950

U.S.A. Information Technology Equipment
