

FEATURES

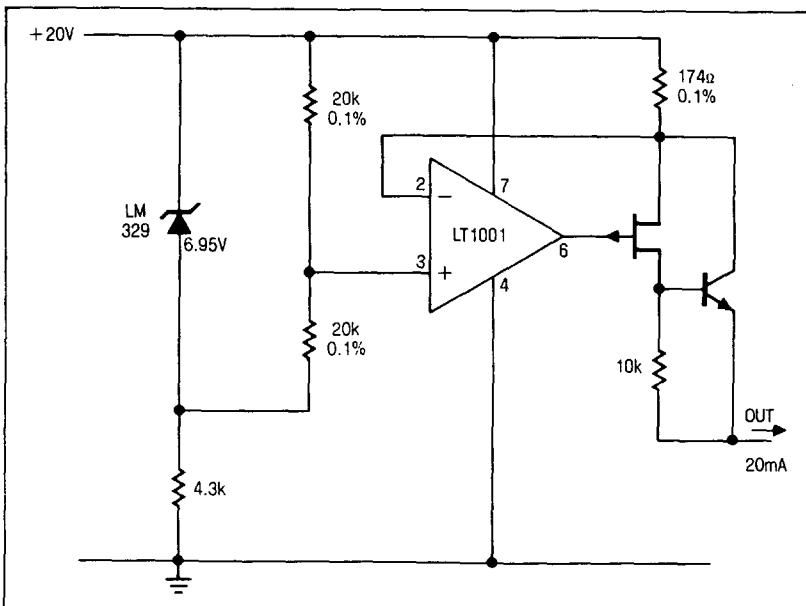

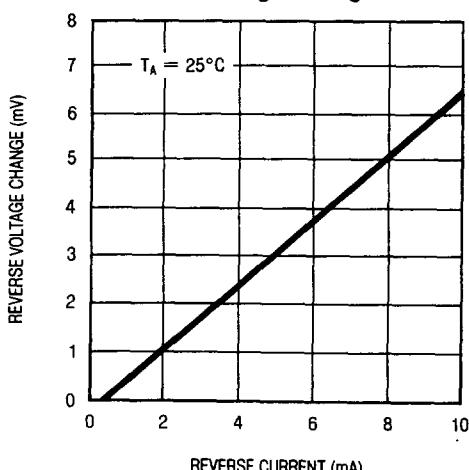

- Guaranteed 10 ppm/ $^{\circ}\text{C}$ temperature coefficient
- Guaranteed 1.0 Ω max. dynamic impedance
- Guaranteed 20 μV max. wideband noise
- Wide operating current range 0.6mA to 15mA

APPLICATIONS

- Transducers
- A/D and D/A Converters
- Calibration Standards
- Instrumentation Reference

DESCRIPTION

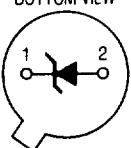

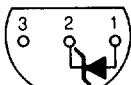

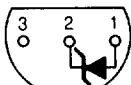

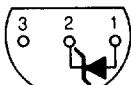

The LM129 temperature compensated 6.9 Volt zener references provide excellent stability over time and temperature, very low dynamic impedance and a wide operating current range. The device achieves low dynamic impedance by incorporating a high gain shunt regulator around the zener. The excellent noise performance of the device is achieved by using a "buried zener" design which eliminates surface noise phenomenon associated with ordinary zeners. To serve a wide variety of applications, the LM129 is available in several temperature coefficient grades and two package styles. A 20mA positive current source application is shown below.

20mA Positive Current Source

Reverse Voltage Change

ABSOLUTE MAXIMUM RATINGS

Reverse Breakdown Current.....	30mA
Forward Current.....	2mA
Operating Temperature Range	
LM129.....	-55°C to 125°C
LM329.....	0°C to 70°C
Storage Temperature Range	
LM129.....	-65°C to 150°C
LM329.....	-65°C to 150°C
Lead Temperature (Soldering, 10 sec.).....	300°C

$\frac{\Delta V_z}{\Delta \text{Time}}$	Long Term Stability	$T_A = 45^\circ C \pm 0.1^\circ C$ $I_R = 1mA \pm 0.3\%$		20		20			ppm/kHr

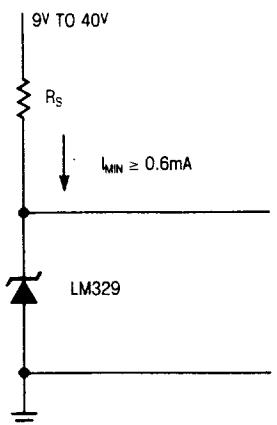

The ● denotes the specifications which apply over full operating temperature range.

Note 1: These specifications apply over the full operating temperature range unless otherwise noted. To determine the junction temperature as a function of the ambient temperature, see θ_{JA} for each package.

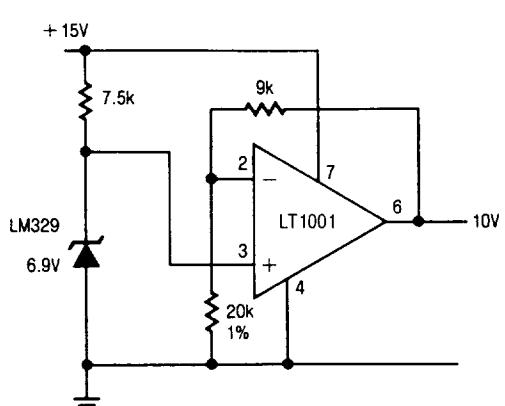

Note 2: Dynamic impedance guaranteed by "Reverse Breakdown Voltage Change with Current".
